## ImageOptim

ImageOptim is a desktop application for macOS that optimizes images to reduce file sizes without sacrificing quality.

The screenshot shows the ImageOptim website for the Mac app. The header has three tabs: 'ImageOptim', 'Mac app', and 'Web service'. The main heading is 'ImageOptim makes images load faster', followed by the subtext 'Removes bloated metadata. Saves disk space & bandwidth by compressing images without losing quality.' Below this are two buttons: 'Download for Free' (green) and 'Other versions' (pink). A small text line reads 'Requires macOS 10.10+ Works with Ventura. It's Free and Open Source. Donate.' A screenshot of the ImageOptim application window is shown, displaying a table of optimized files:

File	Size	Savings
icon.png	11,195	61.2%
picture.jpg	143,772	22.6%

Below the table, it says '+ Saved 59.5KB out of 214.5KB. 41.9% per file on average (up to 61.2%)' and an 'Again' button. The footer contains three columns of text:

- Faster web pages and apps**  
Reduces image file sizes — so they take up less disk space and download faster — by applying advanced compression that preserves quality.
- Image files scrubbed clean**  
Removes invisible junk: private EXIF metadata from digital cameras, embedded thumbnails, comments, and unnecessary color profiles.
- Best tools with drag'n'drop**  
Seamlessly combines all the best image optimization tools: MozJPEG, pngquant, Pngcrush, 7zip, SVGO and Google Zopfli.  
All Free and Open-Source.
