

Tables

The table row element, , is used to add rows to a table before adding table data and table headings.

Table Data Element

The table data element, $\langle \mathsf{td} \rangle$, can be nested inside a table row element, $\langle \mathsf{tr} \rangle$, to add a cell of data to a table.

```
ctl one data

cell two data
```

<thead> Table Head Element

The table head element, <thead> , defines the headings of table columns encapsulated in table rows.

rowspan Attribute

code cademy

Similar to colspan, the rowspan attribute on a table header or table data element indicates how many rows that particular cell should span within the table. The rowspan value is set to 1 by default and will take any positive integer up to 65534.

```
row 1:
 col 1
 col 2
row 2 (this row will
span 2 rows):
 col 1
 col 2
col 1
 col 2
>
 row 3:
 col 1
 col 2
```

Table Body Element

```
r>
row 1

row 2

row 2

row 3

row 3

row 3
```

Table Heading Element

The table heading element, , is used to add titles to rows and columns of a table and must be enclosed in a table row element, .

colspan Attribute

The colspan attribute on a table header or table data element indicates how many columns that particular cell should span within the table. The colspan value is set to 1 by default and will take any positive integer between 1 and 1000.

<tfoot> Table Footer Element

The table footer element, <tfoot> , uses table rows to give footer content or to summarize content at the end of a table.

```
<thead>
 heading 1
  heading 2
 </thead>
col 1
  col 2
 <tfoot>
 summary of col 1
  summary of col 2
 </tfoot>
```

Table Element

In HTML, the element has content that is used to represent a two-dimensional table made of rows and columns.

```
<!-- rows and columns will go here -->
```
