FOR LOOP SHORTHAND

LONGHAND

SHORTHAND

```
for (let fruit of fruits)

app.js
```

If you just wanted to access index, do:

SHORT CIRCUIT EVALUATION

Long Hand

```
let dbHost;
if (process.env.DB_HOST) {
   dbHost = process.env.DB_HOST;
} else {
   dbHost = 'localhost';
}
```

Short Hand

```
const dbHost = process.env.DB_HOST || 'localhost';
```

FIND FUNCTION SHORTHAND

Long Hand

```
app.js
const pets = [
  { type: 'Dog', name: 'Max'},
  { type: 'Cat', name: 'Karl'},
 { type: 'Dog', name: 'Tommy'},
function findDog(name) {
  for(let i = 0; i<pets.length; ++i) {</pre>
    if(pets[i].type === 'Dog' &&
pets[i].name === name) {
      return pets[i];
```

Short Hand

MATH SHORTHANDS

Shorthand for Math.floor()

```
app.js
//Longhand
Math.floor(4.9) === 4 //true

//Shorthand
~~4.9 === 4 //true
```

Shorthand for Math.pow()

```
//Longhand
Math.pow(2,3); // 8
Math.pow(2,2); // 4

//Shorthand
2**3 // 8
2**4 // 4
```

JOINING & CLONING ARRAYS

Longhand

```
// joining arrays
const odd = [1, 3, 5];
const nums = [2, 4, 6].concat(odd);
console.log(nums); // [2, 4, 6, 1, 3, 5]

// cloning arrays
const arr = [1, 2, 3, 4];
const arr2 = arr.slice()
```

Shorthand (Using Spread operator)

```
// joining arrays
const odd = [1, 3, 5];
const nums = [2,4,6,...odd];
console.log(nums); // [2,4,6,1,3,5]

// cloning arrays
const arr = [1, 2, 3, 4];
const arr2 = [...arr];
```

DESTRUCTURING ASSIGNMENT

Longhand (Not properly using ES6)

Shorthand (ES6 used properly)

```
import { observable, action, runInAction } from 'mobx';

const { store, form, loading, errors, entity } = this.props;

//You can even assign your own variable names:
const { store, form, loading, errors, entity:contact } = this.props;
```

STRING INTO A NUMBER

Long Hand

```
const num1 = parseInt("100");
const num2 = parseFloat("100.01");
```

Short Hand

```
const num1 = +"100";
// converts to int data type

const num2 = +"100.01";
// converts to float data type
```

TEMPLATE LITERALS

Longhand

```
const welcome = 'You have logged in as ' + first + ' ' + last + '.'
const db = 'http://' + host + ':' + port + '/' + database;
app.js
```

Shorthand

Other Shorthands " I'm assuming you all might know "

- Arrow Functions
- Implicit return Shorthand
- Object Property Shorthand
- Decimal Base etc...
